

SMOKE EVADER™

Made In Canada
Fait au Canada

414 mL - 1800 psi Escape Airpack
For use in the event of a fire or toxic environment

The Lucidair Smoke Evader is a fire escape airpack designed to facilitate exit from a smoke filled room or toxic environment. Deploys in seconds last for minutes. * Have one for each member of your family. Smoke Inhalation: The #1 killer in residential fires. Don't let it happen to you tonight!

L'Evadeur de Fumée de Lucidair est un réservoir d'air à utiliser en cas d'incendie, et conçu pour faciliter l'évacuation d'une pièce remplie de fumée, ou d'un environnement toxique. Se déploie en quelques secondes et dure plusieurs minutes. * Procurez-vous en un pour chaque membre de votre famille. L'inhalation de fumée est le tueur #1 dans les incendies domestiques.

Ne laissez pas cela vous arriver cette nuit!

Contents: Breathable Air
Contenus: l'air respirable.

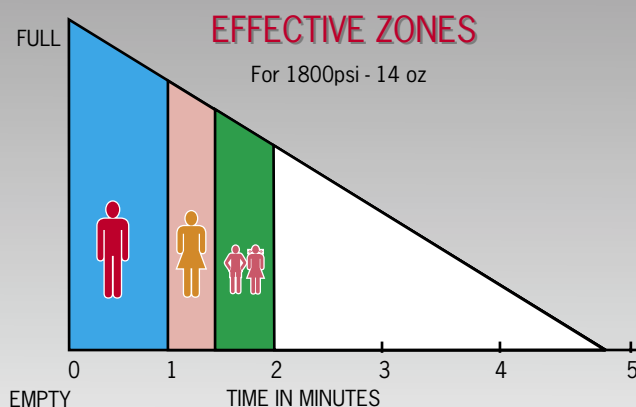

*Users demand determines effective time.
*La durée utile varie selon la demande de l'utilisateur.

Directions For Use:

Hold grip and rotate tank in direction of arrows. (Like opening a screw top bottle) Rotate approximately one turn. Place mask to face and breathe normally. Escape quickly, do not return. This device delivers a significant quantity of air, it can be quite loud, this is normal & safe. Keep out of the reach of children under six. Deploy as soon as you smell smoke. Sound an alarm. Call for assistance.

Practice and Recharge.

Recommended yearly visual inspections by qualified dive shop personnel. Each year it is a good idea to practice deploying a tank. Should be used to practice fire alarm drills. Charge immediately after use. If you have more than one in the home try using just one a year and rotating years. Every 5 years replace or hydrotest the tank, visit our website for replacements. Valve mechanism is reusable. Unit is packed with a spare set of "O" rings. Replace when servicing. To recharge, take airpack to a local SCUBA shop. See our website for locations in your area. The fill fitting is identical to a paintball fitting, call and ask if they can recharge air style paintball cylinders. Do not recharge at paintball facilities.

Contents: Atmospheric Air 21% Oxygen 78% Nitrogen 1% Trace gasses. Safe Non-Flammable. PADI/NAUI Scuba Certified Charged. Cylinder TC and DOT Approved. Easily opened. Rechargeable.

Helpful Hints:

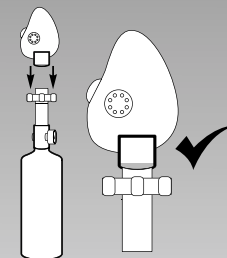

Have, and practice an escape plan! Always feel doors before opening. Keep Low. If your clothes catch flame, drop & roll. Do not break windows, open normally if possible. If smoke enters, close. Practice blindfolded. Encourage children to yell for help if they spot fire or smoke. Discourage children from hiding in the event of a fire. **Install smoke detectors and change batteries twice a year.**

Further Information:

This device is equipped with a flow control style delivery mechanism, while this is not the most efficient system of contents delivery it is the type of device most intuitive to novice users. A regulator style device (while more efficient) delivers at a constant rate until fully depleted, this gives users a false sense of security. Only by constant observation of contents gauges can a user accurately judge a regulator style device's remaining charge. By the time the Smoke Evader is at about half charge, users will have a clear (thus Lucid) sense (by level of flow, pitch and volume) of the diminishing charge. The only reason this device should ever be used is to escape or practice escape from a toxic environment. Never under any circumstances use the device to re-enter a dangerous environment, that is the job of professional rescuers. Safely escape and call emergency response personnel.

Assembly Instructions:

Never under any circumstances use without mask installed!

Hanging Instructions:

Recommended location for unit is to be hung by the bracket supplied, within arms reach of your bed. Alternatively, it can also be stored in a night table drawer. Recommended if you have small children.

Read tank label carefully.
